

ENVIRONMENTAL SERVICES

It's important to understand the environmental issues before beginning a project. Projects in undeveloped areas may have wetlands or endangered species that require advance planning, whereas redevelopment projects in urban areas may have contamination that restricts future land uses. WGI identifies the environmental issues during early project planning, obtains the environmental permits during design, conducts the work during construction, and completes any post-construction compliance monitoring required by the permits. Our environmental team is with you every step of the way to help you avoid environmental surprises, high mitigation costs, permit delays, construction stoppages, and environmental violations.

Tree Permitting and Arborist Services

Wetland Permitting

Contamination Assessment

Protected Species Relocation

Seawall, Dock, and Coastal Permitting

Environmental Services

- Contamination
- Ecological Restoration
- Expert Witness
- Invasive Vegetation Control
- NEPA Compliance
