SELECTED COMMERCIAL INTERIORS MEP EXPERIENCE

Statement of Qualifications
Re: MEP Statement of Qualifications

Thank you for considering WGI as a partner. Our commitment is to YOUR success, and below are the benefits of selecting WGI MEP services.

REVIT Expertise:

- WGI makes full use of Autodesk's REVIT platform. Our MEP systems are modeled with accurate geometric and engineering information, making coordination like space considerations and scheduling integral to the design process.
- WGI actively leverages the complete capabilities of REVIT, making use of the most current technologies that integrate with the program. Our dedication to the most current tools translates to better design and clearer communication with the whole project team.
- WGI MEP utilizes best-in-industry technologies for communication and model sharing. For example, every project is shared via the BIM360 Cloud Platform, allowing consistent BIM sharing between teams.

Team Makeup:

- Our team is an expert in our field. Most of our associates are licensed Professional Engineers. Our core team has been consistent for years, specializing in the nuances of jurisdictions where we practice.
- WGI MEP staffs every project for success. Your project will be assigned a project manager, and a lead engineer in each discipline involved. Additionally, WGI tasks a licensed engineer team leader the responsibility for overall design coordination, quality assurance, and product consistency. We find this model allows you to go to the right person with your needs throughout the project.

Quality:

- At WGI, every project goes through our rigorous QA/QC policy.
- Quality Assurance is highlighted at every stage with peer reviews, standards reviews, clash detection, and interim plan reviews by senior staff.
- Quality Control is completed in a multi-stage process with the engineer of record, project manager, and a principal engineer completing a review before a project is issued for construction.

At WGI, we believe the difference is apparent. Our dedicated experts have the technology, processes, and support necessary to deliver success to your team. We look forward to speaking with your further and supporting your next project.

Regards,

Marc Remmert, PE
Director, MEP Engineering
THIS IS WHO WE ARE
WGI is a national design firm in the public and private infrastructure markets.

Founded in South Florida in 1972, WGI grew from a private client base and diversified into the public sector by growing our expertise to include a wide variety of disciplinary services. With nearly 600 professionals in 20 offices nationwide, WGI is concentrated on providing cutting-edge efficiencies and solutions that affirm our national trademark: Tomorrow’s Infrastructure Solutions, Today.

WGI is a carefully chosen balance of experienced industry veterans and youthful visionaries. Our combination of talents enhances WGI’s ability to execute our strategic plan of market leadership while meeting evolving infrastructure demands and maintaining our focus on autonomy, smart and connected cities, resiliency, and sustainability.

An award-winning firm consistently recognized for exceptional service, commitment to providing a superb work product, and continuing a four-decade tradition of being engaged, passionate, responsive, accountable, creative, and inspired. WGI is committed to remaining at the forefront of innovation by investing in the tools and the people necessary to remain constantly agile and able to deliver tomorrow’s possibilities, today.

WGI serves a multitude of private clients, public agencies, and municipalities. We remain dedicated to the development and economic prosperity of the many local communities in which we live and work. We intently focus on delivering our professional commitments while encouraging our associates to “give back” by supporting a variety of non-profits and professional organizations through their leadership, volunteerism, and sponsorship.
MECHANICAL, ELECTRICAL, AND PLUMBING (MEP) SERVICES

MEP SERVICES

- Thermal Analysis
- Energy Benchmarking
- Cost Estimating
- Peer Reviews
WE’VE DONE THIS BEFORE
HOME DEPOT TECH CENTER
Austin, Texas

Home Depot’s Austin Technology Center (ATC) will be home to up to 500 employees specializing in software engineering, system engineering, UX design, and product management. The center is part of Home Depot’s strategy to incorporate more technology into the customer shopping experience, supply chain, delivery capabilities, and workforce management systems.

WGI provided mechanical, electrical, and plumbing (MEP) engineering design services, including HVAC system, plumbing, lighting, and power design. Services also included construction administration for core and shell office and corporate interiors.

Construction: $28.5M
YETI Flagship Store
Austin, Texas

The YETI Flagship store is located in downtown Austin. Once a neglected historic warehouse, the design team transformed 8,600 square feet of space into a mecca for YETI fans and outdoor enthusiasts.

WGI provided civil and MEP engineering services for the space, including a bar and a music stage. In designing the HVAC and electrical systems, WGI kept in mind YETI’s aesthetic goal of drawing people in and showcasing their products... not the ductwork.

WGI’s final MEP design ensured comfortable temperatures and consistent lighting throughout, even with open-air doors rolled up amid a Texas summer day.
CoreLogic engaged BOKA Powell and WGI to perform the design for their new 60,000 square-foot space in Austin, Texas. This clever adaptive re-use of an existing warehouse allowed for a unique aesthetic with 25 foot exposed ceilings. By arranging walls of various heights, acoustical separation zones were created, giving way to a centralized breakroom, all while maintaining an effective space plan that allowed for natural light to penetrate throughout. This new office environment provides access to several lounge areas, collaboration zones, and an outdoor terrace.

Joelle McCormack, P.E.
The Texas Public Policy Foundation building is located at 901 Congress Avenue in downtown Austin. Sixth River Architecture and Design Workshop worked with WGI on the five-story, 42,000 square-foot office building.

As the development consultant and design engineer, WGI secured demolition permits for the existing structure, dating back to the late 1800s. The scope of services for this project included coordination and client representation at the City of Austin’s Historic Landmark Commission, coordinating streetscape improvements associated with the City of Austin “Great Streets” program, and the Site Development and License Agreement permitting process.
The Everlywell space within the 823 Congress building was a continuation of WGI's work with S. Tipton Studio throughout the downtown office building. The design included an open-air feel, new lighting, common space, and new conference rooms. The design of the space made extensive use of the 12th-floor views of downtown Austin. WGI performed MEP design engineering and construction administration activities.

EMANCIPET CLINIC
Pflugerville, Texas

WGI provided the MEP infrastructure for the 2,700 square-foot Emancipet Clinic in Pflugerville. The design was accomplished as a part of the Perkins + Will architecture team. Emancipet Pflugerville provides an examination, dental, and surgery as a part of their veterinary services. The space also serves as an office for veterinary staff associated with day-to-day services. The project was designed to meet the high-performance standards of Emancipet and Perkins + Will.

PROJECT HIGHLIGHTS

• Four exam rooms, one surgery room, and one dental room
• Support critical veterinary operations

RESUMES
Marc has extensive experience in electrical engineering, distribution design, circuit calculations, and lighting simulation analysis. He has worked on a variety of projects, including vertical mid- and high-rise structures, electrical primary infrastructure of master-planned urban communities, and roadway lighting design for both urban and retail areas. Marc has experience in the preparation of lighting analyses and designs using the AGI32 and Lithonia Visual software platforms. He works with local agencies to provide feasible solutions to electrical distribution and lighting that meet the needs of the community from both aesthetic and functional perspectives.

Joe is a licensed mechanical engineer with experience across a variety of project types and scopes of work within the built environment. As a MEP project manager at WGI, Joe partners with clients to ensure that MEP design meets and exceeds the owners project requirements throughout project delivery. With a technical background, Joe effectively guides the client through design strategy and decision making. A core focus for Joe is sustainability through which he seeks to identify cost-effective strategies that make buildings less environmentally impactful. With experience at architecture firms and as a 3rd party consultant, Joe understands the communication needs on all sides of the design and construction table. Joe believes in feeling the same ownership of a project as the client and takes pride in ensuring the integrated team creates spaces that are beautiful, sustainable, and exceed expectations.
